PROFESSIONAL SUMMARY

Results-driven Data Analyst with over 3 years of experience translating complex data into actionable insights for mission-focused organizations. Proficient in SQL, Python, and BI tools (Tableau, Holistics.io, Looker Studio) to gather stakeholder needs, deliver data-driven recommendations, and enhance efficiency. Skilled in Agile project management (Trello, Asana) for sprint planning and cross-functional collaboration. Eager to leverage analytical expertise to support improved outcomes and organizational goals.

TECHNICAL SKILLS AND TOOLS

* Business Analysis	* Data Quality Assessment	* Google Slides
* Data Analysis	* Data Storage	* Holistics.io
* Data Cleaning	* Data Storytelling	* Looker Studio
* Data Collection	* Data Visualization Design	* R (tidyverse, Dplyr)
* Data Ethics	* Data Wrangling	* Rstudio
* Data Fluency	* Exploratory Data Analysis	* Tableau
* Data Gathering	* SQL	* Trello
* Data Limitations And Biases	* Python	* Web Development
* Data Manipulation	* Asana	

PROFESSIONAL EXPERIENCE

Data Analyst

LaunchCode (Remote - STL) | July 2022 - July 2025

- * Translated business requirements into interactive dashboards (Holistics.io, Looker Studio), enabling non-technical stakeholders to self-serve insights, accelerating decision-making, and supporting operational improvements.
- * Partnered with cross-functional stakeholders to elicit and document business needs; designed and executed complex SQL queries on large datasets to identify trends, delivering actionable insights that informed strategic decisions and process enhancements.
- * Managed Agile-like project workflows, including sprint planning, task tracking, backlog prioritization, and visualization using Trello (initially) and Asana (post-migration), while participating in stand-ups and retrospectives to ensure timely delivery of data insights.
- * Collaborated with cross-functional teams to translate data findings into business strategies, contributing to mission-driven outcomes for underserved participants entering tech careers.

Data Analyst Associate

LaunchCode (Remote - STL) | February 2022 - July 2022

- * Created preliminary reports and visualizations to support management's strategic recommendations.
- * Supported requirements gathering and data preparation using Python and SQL for team projects focused on process optimization and strategic recommendations.

CERTIFICATIONS

- * Machine Learning ZoomCamp (DataTalks.club) - February 2026
<https://certificate.datatalks.club/ml-zoomcamp/2025/fbdb6937c39cbefe27d8a84c0c2876fedc47847d.pdf>
- * Data Analyst Nanodegree (Udacity) - November 2024
<https://www.udacity.com/certificate/e/141b9374-f5c4-11ee-bbfe-2bc8e12468ce>
- * Data Analysis with Python (freeCodeCamp) - September 2021
<https://www.freecodecamp.org/certification/tgill1085/data-analysis-with-python-v7>
- * SQL for Data Science (Coursera) - August 2021
<https://www.coursera.org/account/accomplishments/certificate/YAMKW2CBWG6J>
- * Intro to Machine Learning (Kaggle) - August 2021
<https://www.kaggle.com/learn/certification/tgill1085/intro-to-machine-learning>
- * Google Data Analytics Specialization (Coursera) - July 2021
<https://www.coursera.org/account/accomplishments/specialization/certificate/ZU5PASHXS62P>

KEY PROJECTS

MLZoomCamp2025: Hardware-Based Steam Games Recommender (2026)

[steamgameshardwarerec.streamlit.app](#)

A machine learning-powered web app that recommends Steam games based on your PC hardware, helping users quickly determine if their computer can run specific games, without invasive scans, downloads, or extensive research across the Steam Store.

The project addresses real-world challenges like hardware pricing crises, inconsistent performance data, and time-consuming compatibility checks by combining Steam game data, hardware benchmarks, fuzzy matching, and a trained Random Forest model to predict compatibility.

- * Data cleaning and processing of inconsistent datasets with Pandas
- * Feature engineering including fuzzy matching and scoring
- * Machine learning modeling (Random Forest classification)
- * Synthetic data generation for balanced training
- * End-to-end ML pipeline development and deployment
- * Interactive web app creation with Streamlit
- * Model management and version-controlled deployment
- * Transforming complex data into user-friendly recommendations

Technologies: Python, Pandas, NumPy, Scikit-learn, Joblib, Matplotlib, Seaborn, Streamlit, Rapidfuzz, Requests

OnyxData #Datadna December Challenge: Billboard's Top 100 Christmas Songs 1958-2017 (December 2021)

[View Project on Tableau Public](#)

Analyzed Billboard Christmas songs dataset to determine the "greatest" holiday track. Created an interactive viz with seasonal insights and fun elements (toggle to fire-side view).

- * Tableau dashboard creation and interactivity
- * Data storytelling with seasonal/time-based trends
- * Creative visualization design (custom elements like fire-side toggle)
- * Public sharing and challenge participation

Technologies: Excel, CSV, Tableau, Spotify API

DataXP.AI Airbnb Market Dashboard (December 2021)

[View Project on Tableau Public](#)

Built a dashboard to help property owners/investors understand Airbnb markets: average prices, bedroom distributions, amenity proportions (pools, AC, etc.), and high-level overviews.

- * Tableau dashboard design for stakeholder insights
- * Python preprocessing (Pandas, NumPy, DataPrep, NLTK for text/amenities)
- * Property attribute analysis and proportional visualizations
- * Business-oriented market summary creation

Technologies: Excel, CSV, Python, Pandas, NumPy, DataPrep, NLTK, Tableau

London Bus Safety Performance Dashboard (November 2021)

[View Project on Tableau Public](#)

Interactive Tableau dashboard with borough filters showing safety metrics and trends from London bus incident data.

- * Filter-based interactive dashboards in Tableau
- * Spatial/location data visualization
- * Functional and clean design for practical use

Technologies: Excel, CSV, Tableau

SuperStore KPI & Charts Dashboard (November 2021)

[View Project on Tableau Public](#)

Expanded guided project into a colorful KPI board with enhanced visuals beyond basic numbers, using Tableau Sample - Superstore data.

- * Custom KPI dashboard development in Tableau
- * Creative color and layout choices for engagement
- * Combining metrics with supporting charts

Technologies: Excel, CSV, Tableau

Makeover Monday 2021 Week 34: Entry-Level Job Requirements Viz (November 2021)

[View Project on Tableau Public](#)

Improved visualization from Makeover Monday challenge on the paradox of entry-level positions requiring years of experience.

- * Tableau viz redesign and improvement
- * Critical analysis of existing charts
- * Clear communication of counterintuitive data insights

Technologies: Excel, CSV, Tableau

Hotel Revenue & Parking Trends Dashboard (November 2021)

[View GitHub Repositories](#)

Created SQL database from cleaned Excel data (SSMS), queried into Power BI, and built dashboard answering revenue growth by hotel type, parking demand trends, and seasonality in ADR/guests.

- * Database creation and querying in SSMS/SQL
- * Power BI dashboard development and data import
- * Business question-driven visualization (growth, trends, seasonality)
- * End-to-end ETL from Excel to interactive dashboard

Technologies: Excel, SSMS, SQL, Power BI

FreeCodeCamp Data Analysis with Python: Sales Data Analysis (September 2021)

[View GitHub Repositories](#)

Performed EDA on sales datasets to detect trends, seasonality, and key drivers, highlighting potential areas for performance improvement.

- * Exploratory data analysis and trend detection
- * Data cleaning and preprocessing

- * Visualization of time-series and categorical insights
- * Identification of seasonality and performance drivers
- * Generating actionable business recommendations from data

Technologies: Python, Pandas, Numpy, Matplotlib, Seaborn

Kaggle EDA with Python: Medical Data Visualizer (September 2021)

[View GitHub Repositories](#)

Visualized health-related metrics using Python libraries to reveal patterns and support data-informed analysis in health contexts.

- * Data visualization with Python (Matplotlib/Seaborn)
- * Creating categorical plots and correlation heatmaps
- * Pattern discovery in health-related datasets
- * Effective communication of complex relationships through visuals

Technologies: Python, Pandas, Numpy, Matplotlib, Seaborn

Google Data Analytics Capstone: Bellabeat Case Study (July 2021)

[View Google Slides Presentation](#)

Analyzed Fitbit user data to explore activity, sleep, and health patterns; delivered visualizations and recommendations to support product strategy and user engagement.

- * End-to-end data analysis process
- * Data cleaning and preparation
- * Exploratory analysis and visualization (R / tidyverse / ggplot2)
- * Insight generation and strategic recommendations
- * Data storytelling through presentations

Technologies: R, tidyverse, ggplot2, csv, Google Sheets
